

About the Role

We're seeking a dynamic **Senior Product & Project Manager** to lead cross-functional digital initiatives from conception to launch. In this hybrid role, you'll oversee end-to-end delivery of SaaS-based products while managing stakeholders, timelines, and product vision. You will work directly with engineering, UI/UX, and business teams to shape the future of our B2B2C platforms and digital services.

Key Responsibilities

Define and drive product strategy and delivery roadmap for customer-facing digital platforms (B2B2C/SaaS/Low Code).
Lead Agile project management practices across multi-disciplinary teams (product, engineering, ops).
Coordinate with clients and internal stakeholders to gather and validate business/system requirements.
Translate requirements into functional specs and collaborate with UI/UX and dev teams for implementation.
Oversee operations, budgets, and change management across multiple concurrent digital initiatives.
Track and report KPIs, product adoption metrics, and continuous improvements to C-level stakeholders.
Ensure QA best practices and drive operational efficiency in development and deployment workflows.
Stay ahead of digital and SaaS trends to propose innovation-driven improvements.

Qualifications & Experience

8+ years in digital product/project management roles.
Proven experience in SaaS, B2B2C platforms, and tech-enabled service delivery.
Background in Computer Science/Engineering (Engineering degree preferred).
Hands-on experience in Agile/Scrum methodologies.
Past experience managing full-stack dev teams and UI/UX deliverables.
Knowledge of Docker, modern dev environments, and software lifecycle practices.
Exceptional communication, leadership, and stakeholder management skills.
Certifications such as DDSC, Scrum Fundamentals, Digital Marketing are a strong plus.
